# REPORT OF THE METROPOLITAN DISTRICT COMMISSION

To the Honorable the Senate and House of Representatives of the Commonwealth of Massachusetts in General Court assembled.

The Metropolitan District Commissioner has already presented to your Honorable Body an abstract of the account of the receipts, expenditures, disbursements and liabilities of the Metropolitan District Commission for the fiscal year ending on November 30, 1932, and now, in accordance with the provisions of section 100 of chapter 92 of the General Laws, presents a detailed statement of its doings for the calendar year ending on December 31, 1932.

#### THIRTEENTH ANNUAL REPORT

# I. Organization and Administration

# COMMISSION, OFFICERS AND EMPLOYEES

The term of office of William F. Rogers expired on November 30, 1932, but as yet no appointment has been made. The membership of the Commission has consequently remained as in the preceding year: Davis B. Keniston, Commissioner, George B. Wason, William F. Rogers, Charles H. J. Kimball and Melvin B. Breath, Associate Commissioners.

William E. Whittaker has continued as Secretary of the Commission, William E. Foss as Director and Chief Engineer of the Water Division and Frederick D. Smith as Director and Chief Engineer of the Sewerage Division. Edwin H. Rogers, who for the past four years had been Director and Chief Engineer of Park Engineering died on March 6, 1932. At the end of the year no one had been appointed to this position.

The maximum number of employees during the year was 1,705, divided as follows: general offices, 47; parks 990; water, 411; sewerage, 257.

#### II. General Financial Statement

## III. Construction

During the year Sections 109, 110, 114, 117, 118, 119 and 120 of the New Neponset Valley Sewer were completed, connections were made with the towns of Norwood and Walpole and the line to these towns was put in operation. The contract for the remaining Section 121 was awarded in March. The line has been completed as far as Washington Street, Canton, and is ready for the town of Canton to connect its sewers to this point, and

the entire line will be completed early in the coming year.

Section 125 of the Braintree-Weymouth sewer started in 1931, had been practically completed by the end of the year. Contracts for the construction of the remaining sections of this line, Sections 122, 123 and 124 were let during the year. Section 123 has been completed, and substantial progress has been made toward completion of the other sections. A contract has been awarded for furnishing the pumping equipment for the Braintree-Weymouth Pumping station and bids were received for the construction of the foundations and substructure work of the station. The entire line should be completed and put in operation during the coming year.

The extension of the Metropolitan Sewer in Mill or Sucker Brook Valley from Forest street to Park street, Arlington, a distance of 2,126 feet, started late in 1931, was completed and put in operation June 1, 1932.

A contract for the extension of the High Level Sewer from its present terminus in Oak Square, Brighton to the Brighton-Newton line, a distance

of 1,960 feet, was let late in the year.

The Squantum Pumping station in Quincy was completed and put in operation during the month of September.

A new 15,000,000 gallon DeLaval pump has been installed in the Quincy

Pumping station, to replace an existing 5,000,000 gallon pump.

The new Weston Aqueduct supply main was completed during the year by the laying of 9,200 feet of 60-inch steel pipe from Elm street to the Charles River at Commonwealth avenue in Newton, where connections were made with the two northerly of the three 60-inch mains that were laid in 1903

under the river just below the Weston bridge.

The work of installing two new pumping units at the Chestnut Hill station is been in progress during the year. These consist of two centrifugal has been in progress during the year. pumping units, one of 1,400 horse power and pumping capacity of 50 million gallons a day and the other of 620 horse power and pumping capacity of 15 million gallons a day. At the close of the year the small unit was erected on the foundation at the station and the large unit had been delivered at the station ready for erection. In connection with the installation of these new pumping units a new vertical fire tube boiler 98 inches in diameter has been erected at Station No. 1.

Venturi meters have been installed between the No. 4 Weston Aqueduct supply main and the city of Newton and town of Watertown distribution pipes in Centre and Galen streets at the Newton and Watertown boundary line and two meters have been purchased for installation on the force main

at Chestnut Hill Pumping Station No. 1.

The contract for the filling of the area along the Charles River from the Dam to Cottage Farm Bridge started in 1931, was continued throughout Most of the filling had been completed by the end of the year, a considerable part of the shaping of the shores was finished and the entire area should be ready to start the loaming, planting and other improvements in the spring of the coming year. A contract was awarded late in the year for the improvement of the area from Longfellow Bridge to the Union Boat Club including the steps at the Boat Haven, and the work was in progress at the end of the year. The following contracts in the Parks Division, started in 1931, were completed during the year:

The Ponkapoag golf course, locker and professional buildings at Redman

Farm, Canton.

The traffic control signals at the Larz Anderson, Western Avenue and River Street bridge approach intersections with Charles River Road in Boston and Memorial Drive in Cambridge.

Shore protection at Revere Beach Reservation.

Grading and steps, northerly side of Bunker Hill Monument grounds, Charlestown.

Relocation of Bold Knob Road, Stony Brook Reservation, Boston.

Underpass at the junction of Memorial Drive and Massachusetts Avenue, Cambridge.

Concrete floor and steel superstructure for Revere Beach Parkway bridge

over the Boston, Revere Beach and Lynn Railroad, Revere.

Nonantum Road extension from Hyde Brook, Newton to Water Street, Watertown.

The addition to the Revere Beach police station and the skating shelter at Belcher Brook pond, Blue Hills Reservation.

The following contracts for construction in the Parks Division were

awarded and completed or substantially completed during the year:
The construction of Hammond Pond Parkway from Hammond Street, Brookline to Boylston Street, Newton, with a traffic circle at the junction of Hammond and Newton streets.

A traffic circle at the junction of South Border Road, Forest Street and Fellsway West, Medford.

The reconstruction of Nantasket Avenue, Nantasket Beach Reservation

between Atlantic Hill and Bay Street, Hull.

Contracts for the excavation of soft material and refilling to grade of Mystic Valley Parkway from Revere Beach Parkway to Mystic Avenue at Harvard Street, Medford and for the reconstruction of Paul's Bridge with the approaches thereto, at East Milton Street, Boston and Milton, were awarded during the latter part of the year and were in progress at the end of the year.

Revere Beach Parkway from Fellsway, Medford, to Main Street, Everett,

has been widened to forty feet.

Memorial Drive between Brookline Street and Fowler Street, Cambridge has been widened to forty feet and resurfaced.

The following boulevards and parkways were resurfaced during the year

with some changes in alignment and grade:

Bold Knob Road westerly 600 feet from Gordon Avenue, and Turtle Pond Road from Bold Knob Road to Dedham Parkway, Stony Brook Reservation; Chickatawbut Road from a point about 5,300 feet easterly of Randolph Avenue to the intersection of Wampatuck Road, Blue Hills Reservation; Furnace Brook Parkway, from Willard Street to Bunker Hill Lane, Quincy; Lynn Shore Reservation from Washington Street, Lynn, to Humphrey Street, Swampscott; Soldiers Field Road, Charles River Reservation, from Western Avenue to Telford Street, Boston; Middlesex Fells Parkway, easterly roadway, from Mystic Avenue to Wellington Bridge, Somerville, and Blue Hill River Road from Randolph Avenue, Quincy, to West Street, Braintree; Fellsway West between Cherry Street and Fulton Street and between Forest Street and Elm Street, Medford.

#### IV. Parks and Reservations

The usual work of maintenance and upkeep of parks, reservations and boulevards has been continued during the year. An appropriation of \$100,000 was made for the relief of the unemployed and about 830 men were employed during the early part of the year for cutting of brush, removal of dead wood and other work, largely in the Middlesex Fells, Blue Hills and Charles River Upper Divisions.

One hundred and seventeen band concerts were given during the summer months in the various parks and reservations at a cost of \$19,855.51. The Symphony concerts were again conducted by Mr. Arthur Fiedler on the Esplanade for four weeks during July and August. The attendance was even

larger than in former years.

At the Riverside Golf Course the second nine holes built in 1931 were put in operation making a full course of eighteen holes. The course was well patronized, approximately 35,000 rounds of golf were played during the season.

Nine holes of the Ponkapoag Golf Course were opened for public use July 1, 1932 and during the remainder of the season 18,000 rounds of golf were played. The remaining nine holes, although completed, were not opened to allow the turf of the greens and tees to become more firmly established. The entire eighteen holes will be ready for use the coming season.

Extensive repairs were made to the steps and shore protection at Revere Beach Reservation and to the seawall at Lynn Shore. Construction of a small sanitary was started about half way between Nahant Beach and Little Nahant. The seawall at Winthrop was pointed and the guard fence repaired.

In the Middlesex Fells Division extensive plantings were made along the new section of Fellsway East, Lynn Fells Parkway, Mystic Valley Parkway and Alewife Brook Parkway. A new feed house and row of cages were built at the Zoo. A section of Alewife Brook near the outlet of Tannery Brook was dredged and the shore line reshaped.

A new parking space for automobiles was built near the tennis courts at Magazine Beach. Extensive plantings of trees and shrubs were made along

Memorial Drive, and considerable grading and loaming and over 5,000 feet of new granolithic walk installed on the lower end of Cambridge Parkway.

The area between Brooks Street, North Beacon Street and the railroad in the Charles River Upper Division was filled, graded, loamed and seeded, and a considerable area was filled between Soldiers Field Road and Charles River near the Speedway. A new practice green, four shelters and a number of seats were built and installed at the Riverside Golf Course.

Considerable areas in the Blue Hills were cleared of brush and dead wood. One hundred Arbor Vitae trees were planted at Spring Street, Dedham, a large number of trees were set out along Quincy Shore Reservation and

replaced along Old Colony Parkway.

At Nantasket Beach a new band stand was built, the Cafe stand enlarged, and extensive repairs made to the hotel. A concrete sidewalk was constructed from the bath house to the Cafe.

#### V. Police

The permanent police force has remained substantially the same during the year, the force at the end of the year consisting of one Captain and Executive Officer, 5 captains, 6 lieutenants, 18 sergeants, 159 patrolmen, 1 policewoman, 1 temporary patrolman, a total of 191.

Edward M. Woods has continued as Captain and Executive Officer. During the year 1 lieutenant died, 3 officers retired, and 5 officers were appointed. Twenty call officers and one policewoman were appointed to

serve during the summer months in addition to the regular force.

During the year 3,894 cases were handled by the department before the courts. The members of the force performed 5,497 hours of extra duty without extra compensation. Eleven officers were commended by the Commission for meritorious conduct.

The morale of the force has been excellent and it has been unnecessary

to prefer charges against any officer during the year.

# VI. Rainfall and Consumption of Water

The rainfall and yield of the watersheds was well above the average during the year, the rainfall being about 5 inches above the average for the past 36 years. Wachusett Reservoir at the beginning of the year was at elevation 374.77, 20.23 feet below high water, and dropped to 374.66 on January 6, the lowest point during the year. The reservoir filled to elevation 394.40 on May 9, the highest stage during the year. About nine and a half billion gallons of water were diverted during the spring from the Ware River. During the latter part of the year the unusual amount of rainfall resulted in filling the reservoir to within a few feet of the high water mark.

During the year 46,845,557,000 gallons of water were furnished to the eighteen municipalities regularly supplied, equivalent to an average daily consumption of 127,993,300 gallons or 90 gallons per capita for the estimated population of 1,422,170 in the district supplied, a decrease over the previous year of nearly seven million gallons per day and nearly six gallons

per capita per day.

## VII. Special Investigations

In accordance with the provisions of Chapter 12 of the Resolves of 1932 the Commission investigated and reported on the advisability of developing and improving for park purposes certain property on the Old Colony Boulevard in the Dorcester District of Boston.

In accordance with the provisions of Chapter 13 of the Resolves of 1932 the Attorney General, the Commissioner of Corporations and Taxation and the Metropolitan District Commissioner investigated relative to providing for certain annual payments by the Commonwealth to certain towns on account of the construction of certain additions to the metropolitan water system.

In accordance with the provisions of Chapter 15 of the Resolves of 1932 the Commission investigated and reported on the advisability of constructing

a boulevard or parkway from Administration Road in the city of Quincy to

Willard Street in the town of Braintree.

In accordance with the provisions of Chapter 16 of the Resolves of 1932 the Commission investigated and reported relative to the construction of a foot bridge over the Neponset River between the city of Boston and the town of Milton.

In accordance with the provisions of Chapter 33 of the Resolves of 1932 the Metropolitan District Commission and the Department of Public Works prepared and reported on plans and estimates relative to the establishment of a comfort station and parking place on land near the Wachusett Dam in the town of Clinton.

In accordance with the provisions of Chapter 51 of the Resolves of 1932 the Commission investigated and reported on the advisability of purchasing for park purposes certain property on the westerly bank of the Mystic River

in the city of Somerville.

## VIII. Other Reports

The reports of the Directors of Park Engineering, Water and Sewerage, with tables, statistics and financial statements, are hereto appended.

Respectfully submitted,

DAVIS B. KENISTON, Metropolitan District Commissioner.

February 28, 1933.

# REPORT OF THE ASSOCIATE CIVIL ENGINEER OF PARK ENGINEERING

HON. DAVIS B. KENISTON, Commissioner, Metropolitan District Commission.

DEAR SIR:

The following report is submitted of the work done under the direction and supervision of the engineering department of the parks division during the year ending December 31, 1932.

#### ORGANIZATION

The engineering force has averaged as follows: one director of park engineering, one associate civil engineer, one superintendent of locks and drawbridges, one supervisor of machinery and equipment, one senior civil engineer, five assistant civil engineers, twelve junior civil engineers, one senior engineering draftsman, one general construction inspector, sixteen senior engineering aids, fifteen junior engineering aids, one garage foreman and chauffeur, four stenographers, one plan clerk and forty-seven lock and drawbridge assistants, mechanicians, operators and helpers.

All construction work and the general direction and supervision of all maintenance and repairs of parkways and boulevards, bridges, buildings and structures in the various park divisions and the operation of the various

drawbridges and locks, are in charge of the engineering department.

Of the contracts during 1931 on which work had been in progress during the year, twelve were not completed until the season of 1932, as follows:

Locker and professional buildings at Ponkapoag, completed May 18, 1932. Traffic control signals at the Larz Anderson, Western Avenue and River

Street bridges, Boston and Cambridge, completed July 16, 1932.

Shore protection, Revere Beach Reservation, completed June 6, 1932. Grading and steps, northerly side of Bunker Hill Monument, Boston, completed May 14, 1932.

Relocation of Bold Knob Road, Stony Brook Reservation, Boston, com-

pleted May 14, 1932.

Underpass, Memorial Drive at Massachusetts Avenue, Cambridge, completed May 17, 1932.

Golf course, Redman Farm, Canton, completed May 25, 1932.

Reinforced concrete floor for Revere Beach Parkway bridge over the Boston, Revere Beach and Lynn Railroad, Revere, completed May 16, 1932. Steel superstructure, Revere Beach Parkway bridge over the Boston, Revere Beach and Lynn Railroad, Revere, completed April 15, 1932.

Construction of Nonantum Road Extension from Hyde Brook, Newton. to Water Street, Watertown, completed June 23, 1932.

Additions to police station, Revere Beach, completed September 15, 1932. Construction of skating shelter at Belcher Brook Pond, Blue Hills Reservation, Quincy, completed January 8, 1932.

#### CONSTRUCTION AND MAINTENANCE WORK

During the year plans and specifications have been prepared and construction supervised on the following work done by contract or by the maintenance forces of the various divisions:

#### CHARLES RIVER BASIN

Widening and extension of the Boston Embankment. Work under contract No. 173, which was let October 29, 1931, included filling and sloping to subgrade along the area in progress of development and will soon be com-This work is being done by the Trimount Dredging Company. After the completion of the work under this contract, contracts will be let for the finished surfacing of the work along the embankment, including loam surfaces, walks, and architectural features.

Work is in progress under contract with the C. & R. Construction Company

P.D. 48 for excavating, filling, grading, surfacing, shore protection, concrete and granite masonry and boat landings, southerly from Longfellow Bridge,

Boston.

## MYSTIC VALLEY PARKWAY

A contract has been let for the construction of Mystic Valley Parkway from Revere Beach Parkway to Mystic Avenue at Harvard Street, Medford. This work involves excavating the soft material and filling with good material to subgrade, and is being done by the M. McDonough Company.

## MIDDLESEX FELLS PARKWAY

The work of building traffic circle at the junction of South Border Road, Forest Street and Fellsway West, Medford, under contract with C. J. Maney Co., is nearly completed.

## HAMMOND POND PARKWAY

The work of constructing Hammond Pond Parkway from Newton Street to Boylston Street, including traffic circle at Newton Street, Brookline and Newton, has been completed by the M. McDonough Company. The circle at Newton Street is open to traffic but the parkway road from the circle to Boylston Street is not open to traffic on account of the fact that Boylston Street is partly closed to through traffic because of reconstruction in progress along this street by the Public Works Department.

# NANTASKET BEACH RESERVATION

Work under contract for the reconstruction of the Nantasket Beach Reservation roadway between Atlantic Hill and Bay Street, Hull, has been completed by the M. McDonough Co. This work involved a complete realignment of the travelled way and walks and improvement of the loamed areas and parking spaces, and removal of all overhead wires and poles from the boulevard to a new location along the railroad. The removal of the overhead wires and the poles is in progress.

#### NEPONSET RIVER RESERVATION

Chapter 460 of the Acts of 1931 and Chapter 170 of the Acts of 1932 authorized the widening and reconstructing of Paul's Bridge and approaches over the Neponset River at East Milton Street, Boston, and Milton Street, Milton. Contract for this work has been let to the Lee Construction Company and the work is now in progress.

# RESURFACING OF PARKWAYS AND BOULEVARDS

The widening of Revere Beach Parkway from Fellsway, Medford, to Main Street, Everett, under contract with the M. McDonough Company, has been completed. The roadway was widened to conform to the new width of the bridges over the Revere Beach Parkway.

Resurfacing Fellsway West between Cherry Street and Fulton Street, and between Forest Street and Elm Street, Medford, was done by the C. &. R

Construction Company.

Plans and specifications were prepared and contract let to Coleman Brothers, Inc., for reconstructing Bold Knob Road westerly, 600 feet from Gordon Avenue, and Turtle Pond Road, from Bold Knob Road to Dedham Parkway, Stony Brook Reservation, Boston. Approximately 1,000 feet of roadway were reconstructed under this contract.

The work of reconstructing Chickatawbut Road from a point about 5,300 feet easterly from Randolph Avenue to the intersection of Wampatuck

Road, Quincy, was done by A. G. Tomasello & Son, Inc.

Furnace Brook Parkway from Willard Street to Bunker Hill Lane, Quincy, was resurfaced with bituminous penetration macadam, by the Coleman Brothers, Inc.

Simpson Brothers Corporation did the work of resurfacing Lynn Shore Reservation from Washington Street, Lynn, to Humphrey Street, Swamp-

Soldiers Field Road, Charles River Reservation (Speedway Section) from Western Avenue to Telford Street, Boston, was resurfaced by the M.

McDonough Company.

Alternative bids were received for the widening and resurfacing of Memorial Drive, between Brookline Street and Fowler Street, Cambridge. contract was let to Simpson Brothers Corporation and a bituminous concrete surfacing laid on this section of the roadway. This work included widening the bridge over the Grand Junction Railroad.

The work of resurfacing Middlesex Fells Parkway, easterly roadway, from Mystic Avenue to Wellington Bridge, Somerville, was done by the C. & R.

Construction Company.

The C. & R. Construction Company resurfaced Blue Hill River Road

from Randolph Avenue, Quincy, to West Street, Braintree.

Contract for the construction of a traffic road from Cambridge Street about 570 feet southerly on the westerly side of Soldiers Field Road, Boston (Brighton District) was awarded to the John P. Condon Corporation. The work has not yet been completed.

## BRIDGE REPAIRS

A new floor system was placed on the easterly side of the bridge over the Boston & Maine Railroad, Medford Branch, Middlesex Fells Parkway.

The steel draw of the Dorchester Bay Bridge, Old Colony Parkway, was

Extensive repairs were made to the concrete slab under the westerly track of the New York, New Haven & Hartford Railroad on the Pope's Hill Bridge, Old Colony Parkway.

Repairs were made to the paving and superstructure of the Harvard Bridge,

Charles River Reservation.

A new sidewalk was built on the bridge over the Boston & Maine Railroad near Revere Station, Revere Beach Parkway.

Extensive repairs were made to the culvert at Abbington Street, Revere

Beach Parkway, Everett.

General repairs were made to the following drawbridges: Saugus River Bridge, Lynnway, Malden River Bridge, Revere Beach Parkway, and Wellington Bridge, Middlesex Fells Parkway.

#### MISCELLANEOUS

The work of dredging and grading slopes along a section of the Alewife Brook between Massachusetts Avenue and Broadway, Cambridge, Arlington and Somerville, was done by M. McDonough Co.

The work of installing pumping device for the Ponkapoag golf course, Canton, was done by the Atlantic Pump and Supply Co.

The work of ditching, sweeping, applying bituminous materials, and sanding Blue Hill River Road from Hillside Street, Milton, to West Street, Braintree, was done by E. C. Sargent.

The work of installing plumbing fixtures in the caddy house and workroom of the store house at the Ponkapoag golf course, Canton, was done

by Albert E. Touchet, Inc.

The work of resurfacing the Cambridge approach to the Boylston Street and River Street Bridges with bituminous concrete, was done by the C. & R. Construction Co.

The work of furnishing and erecting two bronze tablets on the Memorial Drive Underpass at Massachusetts Avenue, was done by T. F. McGann &

The work of replacing two dolphins near the locks in the Charles River

Basin was done by the Bay State Dredging & Contracting Co.

Dredging the Charles River near Galen Street Bridge, Watertown, and

P.D. 48 at the junction of Maple Street and Nonantum Road, Newton, opposite

Hyde Brook, was done by John P. Condon Corporation.

The work of retubing the boiler at the Charles River lock was done by the Bethlehem Shipbuilding Corporation, Ltd.

Painting the lock gates at the Charles River Dam was done by J. J.

Collins.

Labor for repairs to the several bridges was furnished by C. W. Dolloff & Company.

Labor for repairs to the steel work on bridges was furnished by the Bethle-

ham Shipbuilding Corporation, Ltd.

Borings were made in the Mystic River between Mystic Avenue and Fells-

way, Medford, by the Gow Company.

The work of widening Old Colony Parkway at its intersection with Tenean and Freeport streets, Boston, was done by the C. & R. Construction Company.

Repairs were made to the damaged coping at Neponset Bridge by E. C.

Sargent.

The work of setting granite edgestone on Quincy Shore Reservation, east of Atlantic Street, was done by the Alert Construction Company.

The work of repairing the damaged portions of the sea wall at Lynn Shore Reservation, has not been completed. This work is being done by Simpson Bros., Inc.

The work of repairing sea walls damaged by the storm of 1931, Winthrop

Shore Reservation, was done by C. W. Dolloff & Company.

# PLANS, STUDIES AND ESTIMATES

Included in the extension of Revere Beach Parkway from Fellsway, Medford, to Mystic Avenue, Somerville, were surveys and studies made for bridge over the Mystic River, authorized by Chapter 450 of the Acts of 1931.

Plans have been made for the construction of Hammond Pond Parkway, Boylston Street to Beacon Street, Newton, for which authorization and

appropriation were made by Chapter 50 of the Acts of 1931.

Plans have been made for the construction of a parkway from North Beacon Street to the junction of Market Street and Arsenal Street, Boston, Brighton District, in accordance with Chapter 371 of the Acts of 1929.

Studies and plans for completing the work of widening and extension of the Boston Embankment between Cottage Farm Bridge and Charles River

Dam are in progress.

Plans and estimates have been made relative to constructing roadway in Blue Hills Reservation from the junction of Chickatawbut Road, Quincy, to Granite Street, Braintree.

Plans and estimates have been made relative to constructing footbridge

across the Neponset River between Mattapan and Milton.

Plans and estimates have been made relative to improving certain land westerly of Old Colony Boulevard and adjoining Savin Hill Beach, Dorchester, for park purposes.

Plans and estimates have been made regarding the advisability of purchasing for park purposes property on the westerly bank of the Mystic

River in the city of Somerville.

Plans and estimates were prepared for tide gates and weirs in the Saugus River at the junction of Boston Avenue, Lynn, and Lincoln Avenue, Saugus.

A topographical survey and plan taken from the Lawrence Estate, Medford, comprising over 285 acres, are being made by a party of engineers furnished by the Emergency Planning and Research Bureau, without any expense to the Commonwealth.

#### PLANS FOR TAKINGS AND CONVEYANCES

Plans for takings and conveyances have been made as follows:

Land to be re-transferred to the City of Woburn on Woburn Parkway near Cove Street.

Exchange of lands in Brookline for Hammond Pond Parkway westerly from Hammond Street.

Plan of abandonment of slope rights in Quincy on the westerly corner of Quincy Shore Boulevard and Sea Street.

Taking of land in Saugus for the Lynn Fells Parkway from Newburyport

Turnpike to Walnut Street.

Plan of land to be transferred in Cambridge by the City of Cambridge of Massachusetts Avenue from Harvard Bridge to the northerly side of Memorial Drive.

Taking of land in Medford at the junction of South Border Road and

Whitmore Brook Entrance, Middlesex Fells Reservation.

Taking of land in Canton east of Farm Street, Blue Hills Reservation. Taking of land in Canton north of Randolph Street to Ponkapoag Pond, Blue Hills Reservation.

Taking of land in Cambridge and Somerville on Alewife Brook Parkway.

southerly corner of Woodstock Street.

Taking of land in Medford for Revere Beach Parkway Extension from Middlesex Fells Parkway to Mystic Avenue at Harvard Street.

Taking of land in Boston from North Beacon Street to Western Avenue,

Charles River Reservation.

Taking of land in Boston on Market Street about 500 feet south of Western Avenue, Charles River Reservation.

Plan of easement in Revere for 42" drain on Revere Beach Parkway.

Taking of land in Medford at junction of South Border Road, Forest Street and Fellsway West for Traffic Circle, Middlesex Fells Parkway.

Taking of land in Milton near Pauls Bridge, Neponset River Parkway.

Plan of conveyance of land in Somerville and Medford on Mystic Valley Parkway south of Auburn Street to the B. & M. R. R.

Plan of easement in Newton at the B. & A. R. R. between Boylston Street

and Beacon Street, Hammond Pond Parkway.

#### LIGHTING OF PARKWAYS AND BOULEVARDS

The lighting systems of Lynn Shore and Nahant Beach Reservations have been reconstructed and contracts for their operation made. The work of removing overhead wires from Nantasket Avenue and installing on ornamental lighting system is in progress. Lights have been installed for the Fellsway West traffic circle and for the traffic circle of Hammond Pond Parkway at the junction of Newton and Hammond Streets, Brookline.

#### TRAFFIC CONTROL SIGNALS

Traffic signals of the vehicle and pedestrian actuated type have been installed and are in operation on a rental basis at the following six intersections: Soldiers Field Road at the Anderson, Western Avenue and River Street Bridges.

Memorial Drive at the Anderson, Western Avenue and River Street Bridges.

Contracts have been made for material and equipment to expedite and protect vehicular traffic and pedestrians crossing the Old Colony Parkway between Columbia Circle and Neponset Avenue. This work includes the installation of vehicle actuated traffic signals at the southerly intersection of Freeport Street and pedestrian and vehicle actuated signals at Redfield, Tolman and Conley Streets and the northerly intersection with Freeport Street.

#### PERMITS

One hundred and seventy-seven permits were issued for driveway entrances and miscellaneous purposes and fifty-six orders concerning restrictions were issued and reported upon. This division has furnished the supervision of all driveway construction work and all other work relating to permits and has reported on building operations where violations of restrictions might be involved.

# ICE BREAKING IN BASIN

The work of breaking ice in the channels of the Charles River Basin below Longfellow Bridge and in Broad and Lechmere Canals for the season of 1931 and 1932 was done by William A. McReel by contract for the sum of \$4,475.

# REPORT OF DIRECTOR AND CHIEF ENGINEER OF WATER DIVISION

DAVIS B. KENISTON, Commissioner, Metropolitan District Commission.
SIR: I respectfully submit the following report of the construction and maintenance operations of the Water Division for the calendar year 1932.

#### Organization

At the beginning of the year there were 58 permanent employees in the main and branch offices, and 305 permanent employees engaged in maintaining and operating the reservoirs, aqueducts, pipe lines, hydroelectric and pumping stations and in doing miscellaneous construction work. Including the temporary force employed during the summer the maximum

number of employees of all classes at any time during the year was 414. There are now 57 permanent employees in the main and branch offices and 312 permanent employees engaged in the maintenance and operation of the works.

# Metropolitan Water District and Works

The Water District now includes 20 municipalities with an area of about 174 square miles and a population as of July 1, 1932 of 1,541,940. The Water Works lands include an area of about 19,000 acres, of which about

2,000 acres have been planted with pine trees.

The works under the control of the Water Division include 9 storage reservoirs with 200 square miles of tributary watershed, a total storage capacity of 80 billion gallons and water surface of 8,600 acres; 60 miles of aqueducts; 2 hydroelectric power stations of a capacity of 7,000 horse-power; 16 miles of high-tension power transmission line; 5 distribution pumping stations with a combined equipment of 6,100 horse-power and pumping capacity of 282 million gallons a day; 12 distribution reservoirs with a capacity of 2.5 billion gallons, and 165.25 miles of distribution mains. The consumption of water from the Metropolitan Water Works during the year by the 18 municipalities regularly supplied was 46,845,557,000 gallons, equivalent to an average daily consumption of 127,993,300 gallons or 90.0 gallons per capita for a population of 1,422,170 in the district supplied.

#### Construction

# WESTON AQUEDUCT SUPPLY MAINS

The permanent resurfacing of Galen and Maple streets, where pipe laying work under Contract No. 83 was completed so late in 1931 that this work could not be done under favorable condit ons, was begun in April and was completed May 12. The total value of the work done under Contract No. 83 in 1931 and 1932 was \$138,031.30. March 29 Contract No. 86 was made with Coleman Brothers, Inc., for laying 9,200 linear feet of 60-inch steel pipe remaining to complete the No. 4 Weston aqueduct supply main. This work was completed November 4, 1932. The total value of the work done under the contract is \$138,538.19. Settlements amounting to \$6,694.90 have been made for 38,680 square feet of land acquired in fee for No. 4 main between North Beacon Street and Hillside Avenue in Boston.

#### NORTHERN HIGH SERVICE PIPE LINES

Surveys have been made and plans are nearly completed for the proposed 20-inch pipe line, about 21,500 feet in length, which will extend from the existing northern high service pipe line in Ocean Avenue near Revere Street in Revere to Broad and Washington streets in Lynn, to reinforce the existing pipe line which supplies the towns of Swampscott and Nahant.

# ADDITIONAL PUMPING EQUIPMENT FOR CHESTNUT HILL STATION No. 1

Contract No. 84 for two steam turbine driven centrifugal pumping units, one of 1,400 horse-power and pumping capacity of 50 million gallons a day and the other of 620 horse-power and pumping capacity of 15 million gallons a day, was made with the Warren Steam Pump Company, Inc., January 20. The steam turbines were made at the West Philadelphia shops of the Westinghouse Electric & Manufacturing Company in Pennsylvania, and the official shop tests of both turbines were made September 14. The centrifugal pumps were made at the Contractor's shops in Warren, Mass., and the official shop test of the small pump was made July 31, and of the large pump October 2. At the close of the year the small unit was erected on the foundation in the pumping station and the large unit was delivered at the station ready for erection as soon as the foundation and the suction and discharge piping are completed. In connection with the installation of the new pumping units a new vertical fire tube boiler 98 inches in diameter, constructed

under Contract No. 53-M, was erected in Station No. 1 under Contract No. 54-M and was covered with non-heat-conducting covering under Contract No. 57-M.

#### METERS AND CONNECTIONS

In June a 12-inch by 14-inch Venturi meter connection was installed between the No. 4 Weston Aqueduct supply main and the city of Newton and the town of Watertown distribution pipes in Center and Galen streets at the Newton and Watertown boundary line. Two Venturi meters had been purchased for installation on the force main at Chestnut Hill Pumping Station No. 1 but had not been installed at the close of the year. The total expenditure for Meters and Connections during 1932 is \$10,000.19.

# PURCHASE OF SPECIAL CASTINGS

Contract No. 89 for furnishing 112 tons of special water pipes and castings was made with the Warren Pipe Company of Massachusetts, Inc., May 24. The total value of the work done under this contract is \$10,572.70.

#### Maintenance

### PRECIPITATION AND YIELD OF WATERSHEDS

For the Wachusett watershed the total precipitation of 49.93 inches is 4.95 inches above the average for the past 36 years that records have been kept, and includes unusual rainfalls of 5.76 inches in 19 hours on September 16, 5.54 inches in 75 hours October 17 to 20, and 3.46 inches in 88 hours November 6 to 10. For the Sudbury watershed the total precipitation of 51.12 inches is 6.76 inches above the average for the past 58 years. At Cordaville in the Sudbury watershed there was a rainfall of 8.17 inches on September 16, and the total rainfall for the storms of September 16, October 17 to 20 and November 6 to 10 amounted to 16.93 inches. For the Cochituate watershed the total precipitation of 51.63 inches is 6.78 inches above the average for the past 70 years.

The average daily yield per square mile from the watersheds was for the Wachusett watershed 1,169,000 gallons; for the Sudbury watershed 1,071,000

gallons and for the Cochituate watershed 1,007,000 gallons.

# STORAGE RESERVOIRS

The capacities of the storage reservoirs of the Metropolitan Water Works, the elevation of the water surfaces and the quantity of water stored in each reservoir at the beginning and at the end of the year are shown by the following table:

	Eleva-	,	J.	AN 1, 1932	J.	AN. 1, 1933
Storage Reservoirs	tion 1 of High Water to top of flash boards		Eleva- tion 1 of Water Sur- face	Available Storage (Gallons)	Eleva- tion <sup>1</sup> of Water Sur- face	Available Storage (Gallons)

Totals		82,544,600,000	-	40,067,000,000	- 11	62,585,300,000

<sup>1</sup>Elevation in feet above Boston City Base.

<sup>&</sup>lt;sup>2</sup>Excluding Dudley Pond which was abandoned April 3, 1916.

The total storage capacity shown in the third column of the table is to the bottom of the reservoirs. The available storage shown in columns 5 and 7 is the quantity that can be conveniently used for consumption.

# Wachusett Reservoir

On January 1, 1932 the water in Wachusett Reservoir was 20.23 feet below high-water line. By January 6 the water had been drawn down 0.11 of a foot, to elevation 374.66, the lowest stage reached during the year. The quantity of water then stored in the reservoir was 40,815,900,000 gallons or about 63 per cent of its total capacity. Water in the reservoir reached elevation 394.40, the highest stage during the year, on May 9 when there was 64,161,200,000 gallons of water stored in the reservoir, or 98.76 per cent of its total capacity. From May 9 to October 18, the water in the reservoir was drawn down to elevation 383.93, but with the abundant fall yield the water rose again and was 1.61 feet below high-water line at the close of the year.

During the past year the city of Worcester did not divert all of the yield of the 9.35 square miles of watershed formerly tributary to the Wachusett Reservoir, and in April, May, November and December allowed 431,000,000 gallons of water to flow into the Wachusett Reservoir but payment to the City for water not diverted has not been required, under the agreement of November 2, 1914, since early in 1931 when an additional source of water supply of more than 25 square miles was obtained for the Metropolitan Water District. No water was pumped from the Wachusett Reservoir or

Quinapoxet Pond by the city during the year.

During the year 9,597,900,000 gallons of water was diverted from the Ware River at Coldbrook to the Wachusett Reservoir; the town of Clinton pumped no water from the Wachusett Reservoir under the provisions of Acts of 1923 chapter 348; and 639,500,000 gallons of water was discharged from the reservoir into the Nashua River to comply with the provisions of General Laws, chapter 92, section 14.

The Water Works lands and structures received the usual attention.

Upon removing the granolithic walk, which was constructed on the sheet lead water stop over the roof of the gate chamber at the Wachusett Dam in 1906, to determine the cause of the leakage into the gate chamber, it was found that the sheet lead had disintegrated in many places due to the action of the alkali in the concrete. On October 28 Contract No. 58-M was made with the Clinton Concrete Company to waterproof the roof with 5 plies of pitch and tar felt and lay thereon a reinforced granolithic walk. This work covered an area of 280 square yards and cost \$1,501.74.

## Sudbury Reservoir

At the beginning of the year the water in Sudbury Reservoir was 0.85 of a foot below the crest of the overflow at the dam. From January 1 to March 31, when the flash-boards were put on the overflow, the water in the reservoir varied from 0.22 of a foot to 3.65 feet below the crest and averaged about 1.75 feet below. From March 31 to November 26, while the flash-boards were on the overflow, the water rose to as high as 1.48 feet above the crest, on September 17, and went down as low as 2.71 feet below the crest on November 6. At the end of the year the water in the reservoir was about 2 feet below the crest of the overflow. During the sudden yield from the storm of September 16, 56 million gallons of water overflowed from Sudbury Reservoir into Framingham Reservoir No. 3, and with this exception all water drawn from the Sudbury Reservoir was used for generating electric energy.

The land and structures at the Sudbury Reservoir were cared for in the

usual manner.

# Framingham Reservoir No. 3

During the entire year flash-boards were kept on the overflow of the dam

at Framingham Reservoir No. 3 and all water supplied through the Sudbury Aqueduct to the Metropolitan Water District and to the town of Framingham was drawn from this reservoir, which was replenished from time to time with water from Sudbury Reservoir. Water was wasted into Framingham Reservoir No. 1 from April 20 to 23, September 16 to 18, November 10 to 15, and from December 27 to 31. The waste in April, September and November was due to sudden yields from the watershed and the water was wasted in December so that it could be replaced with water of better quality from the Wachusett and Sudbury reservoirs. The total quantity of water wasted from the reservoir was 955,400,000 gallons.

# Ashland, Hopkinton and Whitehall Reservoirs

No water was drawn from Ashland Reservoir during the year. The reservoir was kept full of water and the yield was allowed to waste over the

spillway.

Water was drawn from Hopkinton Reservoir into Sudbury Reservoir from January 8 to April 12 and from May 20 to August 17. On the latter date the lowest stage, 9.4 feet below high-water line, was reached. The

total quantity of water drawn was 2,230,380,000 gallons.

Water was drawn from Whitehall Reservoir into Hopkinton Reservoir from January 18 to August 9, and a small flow was maintained through the pipe line to prevent freezing from January 1 to 17 and from November 28 to the end of the year. The lowest stage, 3.1 feet below high-water line, was reached on August 18.

# Framingham Reservoirs Nos. 1 and 2 and Farm Pond

No water was drawn for the supply of the Water District during the year from Farm Pond, which has been abandoned as a source of water supply for the District, or from Framingham reservoirs Nos. 1 and 2 which are now seldom used for water supply. A daily flow of 1.5 million gallons has been wasted into Sudbury River below Dam No. 1 from Framingham Reservoir No. 1, as required by the Acts of 1872, chapter 177.

The portion of Fountain Street crossing Framingham Reservoir No. 2, which is under the care of the Water Division, was repaired and resurfaced by the town of Framingham and the Water Division paid for the oil and for

applying it to the roadway.

The town of Framingham pumped 204,561,000 gallons of water from its filter-galleries on the shores of Farm Pond during the periods from January 1 to June 6, June 16 to September 23 and September 26 to December 31.

Under legislative authority the Boston & Albany Railroad took approximately 18,800,000 gallons of water and the New York, New Haven & Hartford Railroad took approximately 16,000,000 gallons of water directly from Farm Pond for use in locomotives, and 11,900,000 gallons of water was wasted from the pond into the Sudbury River.

#### Lake Cochituate

No water was drawn from Lake Cochituate for the supply of the Metropolitan Water District during the year but 5,584,800,000 gallons was wasted at the outlet to maintain the water at the desired elevation in the lake. The lowest stage during the year was on January 1 when the water was 3.5 feet below high-water line.

In connection with the widening and rebuilding of the Worcester Turnpike at the bridge crossing the lake, considerable filling was carried out into

the water to provide for widening of the old bridge.

# AQUEDUCTS

The Wachusett Aqueduct was used on 245 days during the year, the total time in service amounting to 99 days, 4 hours and 57 minutes, and the quantity of water discharged from the Wachusett Reservoir into the aqueduct was 33,725,500,000 gallons, equivalent to an average draft of 92,146,000

gallons per day for the entire year, and all of the water was used to generate electric energy at the Wachusett power station before it was discharged into the aqueduct.

During the year the Westborough State Hospital pumped 67,286,000 gallons of water from the aqueduct terminal chamber in Marlborough,

equivalent to an average use of 184,000 gallons per day.

During the year the aqueduct terminal chamber has been repaired and painted and in the fall, while the aqueduct was out of service for several weeks, the upper portion of the open channel was cleaned for a distance of

4,670 feet and repaired where necessary.

The Weston Aqueduct was used every day during the year, the total time in service being 315 days, 13 hours and 20 minutes, and the total quantity of water conveyed from the Sudbury Reservoir to the Weston Reservoir was 36,223,100,000 gallons, equivalent to an average daily flow of 98,970,000 gallons and 17,500,000 gallons was wasted from the aqueduct on December 7. All of this water was used for generating electric energy at the Sudbury

power station.

On December 7 James Mawhinney, a laborer who had been employed on the Works for 15 years and a part of whose duties was to patrol about 4 miles of the aqueduct line in Framingham and care for the fires at gaging chambers Nos 1 and 2, did not return home at the usual time and upon investigation the cover of one of the manholes was found unlocked and left open, although his duties did not require that the cover should be opened. The water was therefore drawn out of the aqueduct and a searching party found his body about 3 A.M. on December 8 near gaging chamber No. 2, about  $2\frac{1}{4}$  miles below the open manhole.

The Sudbury Aqueduct was in continuous use during the year with the exception of 31 hours on October 25 and 26, and of 231/4 hours on November 3 and 4, when the interior of the aqueduct was inspected and two sections where organic growths were found were cleaned. The aqueduct was supplied with 9,244,800,000 gallons of water from Framingham Reservoir No. 3, of which the town of Framingham pumped 277,081,000 gallons for its supply and the remaining 8,967,700,000 gallons, equivalent to an average of 24,501,-913 gallons a day, was delivered to Chestnut Hill Reservoir for consumption

in the Metropolitan Water District.

The State Department of Public Works constructed reinforced concrete mats over this aqueduct to protect it from injury for the entire width of the new State highways at Reservoir Street in Needham and Boylston Street in Newton.

The Cochituate Aqueduct was not in use during the year. The State Department of Public Works strengthened this aqueduct at two places with reinforced concrete to protect it from injury where the new State highway crosses. This work extended for a distance of 90 feet near Dedman's wasteweir and for a distance of 525 feet near Wellesley Hills Square where the highway follows the line of the aqueduct for quite a distance.

The city of Newton laid a sewer under the aqueduct at Alban Road, Waban, 18 feet below the surface of the ground. This was accomplished without danger of undermining the aqueduct by driving steel cylinders under the aqueduct and laying the 15-inch cast-iron pipe therein for the sewer, filling the space between it and the casing with concrete.

All of the aqueduct lands and structures have been cared for in the usual manner.

## PROTECTION OF THE WATER SUPPLY

To prevent pollution of the water supply a Sanitary Engineer and two aids and six watchmen have been employed throughout the year to inspect ice cutting and other operations and the condition of premises on the watersheds and to enforce the sanitary rules and regulations.

Water Division forces have operated the filter-beds on Beaman Street in West Boylston, where the sewage from the Worcester County Training School, which is occupied by about 32 persons, was purified throughout the

year. The Gates Terrace filter-beds at Sterling Junction were operated continuously from April 2 to October 29 to purify the sewage from summer cottages in that vicinity. Sewage from the Eagleville Mill and the Mount Pleasant House in Holden, from the Fay School and Deerfoot Farm sausage factory and dairy at Southborough was purified by privately owned and

operated filter plants.

Surface water from thickly settled drainage areas of 525 acres in the village of Sterling, from 1,280 acres along the brook near Maple Street in Marlborough, from 700 acres along Pegan Brook and an intercepting ditch in Natick was purified by filters operated by Water Division forces before it flowed into the water supply, with the exception of an overflow of 5,320,000 gallons from the brook near Maple Street in Marlborough, which was sterilized with chlorine before it entered Sudbury Reservoir and of 13,397,000 gallons from Pegan Brook and 63,759,000 gallons from the intercepting ditch in Natick, which was sterilized with chlorine before it entered Lake Cochituate.

At the Pegan Brook filters the pumping station was operated on 263 days and 263,547,000 gallons of water was pumped to the filters, an average of 720,074 gallons a day for the entire year. The cost of operating the station and caring for the grounds and filter-beds was \$5,976.14 for labor, \$478.89 for fuel and \$80.11 for supplies and repairs, a total of \$6,535.14 which is \$24.80 per million gallons filtered. The fuel cost per million foot gallons was \$0.16.

The cost of protecting the water supply by filtration was \$1,612.00 for the Wachusett, \$6,678.32 for the Sudbury and \$6,535.14 for the Cochituate

watershed.

During the year 34,538 pounds of copper sulphate was dissolved in a number of storage and distribution reservoirs as an algaecide to destroy microscopical organisms, principally Uroglenopsis, Synura and Dinobryon which occurred in sufficient numbers to give the water an unpleasant taste The copper sulphate was applied as follows: Late in March 4,700 pounds was dissolved in 1,800 million gallons of water in Spot Pond to destroy growths of Uroglenopsis, Synura and Dinobryon; early in April 600 pounds was dissolved in 162 million gallons of water in the Lawrence Basin of the Chestnut Hill Reservoir to destroy a growth of Uroglenopsis; early in June 1,075 pounds was dissolved in the Marlborough arm of Sudbury Reservoir to destroy a growth of Uroglenopsis; early in July 2,950 pounds was dissolved in 1,088 million gallons of water in Framingham Reservoir No. 3 to destroy growths of Uroglenopsis, Synura and Dinobryon; early in August 550 pounds was dissolved in 150 million gallons of water in the Lawrence Basin of the Chestnut Hill Reservoir to destroy a second growth of Uroglenopsis in that basin; August 18 to 20, inclusive, 528 pounds was dissolved in the water flowing from the Sudbury Reservoir into the Weston Aqueduct, and on August 19, 575 pounds was dissolved in 200 million gallons of water in the Weston Reservoir at the outlet of the Weston Aqueduct to destroy growths of Uroglenopsis, Synura and Dinobryon; late in August 18,835 pounds was dissolved in 7,800 million gallons of water in Sudbury Reservoir to destroy growths of Uroglenopsis, Synura and Dinobryon; early in November 4,725 pounds was dissolved in 1,760 million gallons of water in Spot Pond to destroy a second growth of Uroglenopsis and Synura. The cost of the copper sulphate used as an algaecide during the year was \$1,300. The ammonia-chlorine process was used at the Spot Pond Pumping

The ammonia-chlorine process was used at the Spot Pond Pumping Station early in the year in an endeavor to remove objectionable tastes and odors while the pond was covered with ice and copper sulphate could not be used for the purpose, but results were not satisfactory. This process has, however, been used with satisfactory results at the inlet to the Sudbury Aqueduct at Dam No. 1 to insure proper sterilization of the water 16 miles below at the outlet of the aqueduct at the Chestnut Hill Reservoir. The total amount of anhydrous ammonia used for this purpose was 4,266 pounds

and cost \$585.30.

All water drawn for consumption during the year was sterilized with

chlorine as follows: The water diverted to the Sudbury Reservoir from Hopkinton Reservoir at the Cordaville pumping station; water drawn from Framingham Reservoir No. 3 at the entrance to the Sudbury Aqueduct at Dam No. 1, and water drawn from Weston Reservoir at the screen chamber as it flowed from the reservoir. The total amount of chlorine used was as follows: Sudbury Section 63,960 pounds, Distribution Section 155,723 pounds, total 219,683 pounds. The total expenditure for chlorine used in sterilizing the water supply during the year was \$9,025.85.

Improved brook channels, ditches, culverts and watering places were maintained in the usual manner. The cost of maintaining 35 miles of drain-

age ditches on all the watersheds was \$5,470.00.

For the protection of the water supply, property was acquired in the Wachusett Section in West Boylston from Holdoff A. Olson, et als, 3.99 acres; in Sterling from Willie R. Mitchell, et als, 0.33 of an acre, and in Holden from Heirs of Franz Baldauf, 1.66 acres of land with buildings thereon. The 1½ story frame dwelling with outbuildings on the Baldauf property were razed; also the 1½ story wooden frame dwelling with barns and outbuildings at the Sophia P. Waite place at Dawsonville, Holden, and at the Mary J. Holmes place in Sterling Junction.

## CLINTON SEWAGE DISPOSAL WORKS

The works constructed under the provisions of Acts of 1898, chapter 557, for disposing of the sewage of the town of Clinton, were operated during the entire year. The quantity of sewage pumped and disposed of averaged 1,459,000 gallons per day. The cost of operating the pumping station was \$3,177.16, which is \$5.95 per million gallons, equivalent to \$0.12 per million foot gallons. The cost of operating the filters and intercepting sewer was \$10,306.35, which is \$19.31 per million gallons of sewage disposed of by sedimentation, filtration and irrigation.

#### FORESTRY

New plantings made during the year include 101,000 white pine transplants in the Wachusett Section; 250 white pine, 7,800 red pine, 4,300 spruce and 85,450 arbor vitae transplants in the Sudbury Section; and 17,000 red pine, 10,340 Scotch pine and 2,000 spruce in the Distribution Section.

In the Wachusett Section brush, grass and weeds were mowed and burned on 47 miles of marginal fire guards and forest roads 15 to 45 feet wide at a cost of \$30 per mile. The work of mowing brush, sprouts and weeds along the 40-foot fire guards in the Sudbury Section cost \$1,775.68.

The total expenditure for Forestry was \$37,342.60 of which \$1,772.63

was expended for protecting the trees and shrubs from insects.

# HYDROELECTRIC SERVICE

The hydroelectric power stations at the Wachusett Dam in Clinton and the Sudbury Dam in Southborough are operated by the water drawn for water supply from the reservoirs above these dams.

During the year 11,079,776 kilowatt hours of electric energy was developed at the power stations in 1932, or approximately 82 per cent of the usual out-

put.

The value of the energy delivered in 1932 at contract prices is \$68,421.91 and deducting \$53,866.77, the expenditures charged to the operation of both stations and the Water Division transmission line, there was a profit of \$14,555.14.

# Wachusett Station

The power station was operated on 245 working days during the year. On account of heavy rains in August, September and October the power station was not operated for about six weeks in the fall. The statistics are as follows:

P.D. 48 Total energy developed (kilowatt hours) Energy used at power station (kilowatt hours)	6,854,300 31,990	23
Available energy (kilowatt hours)	33 	3,725,500,000 91.03 2.233

#### DISTRIBUTION PUMPING STATIONS

At the five distribution pumping stations 26,244 million gallons of water was pumped during 1932. This is 5,025 million gallons less than was pumped The water pumped at the Chestnut Hill stations included 3,883 million gallons for the low service and 16,765 million gallons for the high service. The high service pumpage includes 54,210,000 gallons for a portion of the supply of the town of Brookline and 99,644,000 gallons for a portion of the supply of the city of Newton, and 618,000,000 gallons which was repumped at the Hyde Park Station for the southern extra high service. At the Spot Pond Station 4,345 million gallons was pumped for the northern high service and at the Arlington Station 633 million gallons was pumped for the northern extra high service. By arrangement with the city of Newton 552,948,000 gallons of water was repumped from the southern high service between November 27, 1931 and November 28, 1932 by the city at its Ward Street booster station for use on the high lands in Belmont and Watertown where satisfactory service cannot be furnished from the Chestnut Hill Station, and for this pumping the Commonwealth has paid the city \$7,159.51.

The average engine duties at the Water Division stations, based on plunger displacement and total coal used for all purposes, including heating and

lighting the stations, are as follows:

Chestnut Hill Station No. 1, 131,573,991 foot pounds per 100 pounds of

bituminous coal averaging 14,792 British thermal units per pound.

Chestnut Hill Station No. 2, 134,296,405 foot pounds per 100 pounds of mixed bituminous and anthracite coal averaging 14,463 British thermal units per pound.

Spot Pond Station, 106,443,004 foot pounds per 100 pounds of bituminous

coal averaging 14,709 British thermal units per pound.

Arlington Station, 102,581,087 foot pounds per 100 pounds of bituminous

coal averaging 14,738 British thermal units per pound.

Hyde Park Station, 74,559,850 foot pounds per 100 pounds of mixed bituminous and anthracite coal averaging 14,175 British thermal units per

pound.

At the beginning of the year there was 1,217 gross tons of bituminous coal and 42 gross tons of anthracite screenings on hand at the pumping stations, and the amount on hand at the end of the year was 1,269 gross tons of bituminous coal and 261 gross tons of anthracite screenings. During the year 8,507 gross tons of bituminous coal and 1,054 gross tons of anthracite screenings were burned at the pumping stations.

Three old boilers which had been in service for 32 years in Chestnut Hill Station No. 2, were removed and three new vertical fire tube boilers 98 inches in diameter, built by the D. M. Dillon Steam Boiler Works under Contract No. 53-M were erected under Contract No. 54-M, and at the end of the year were being insulated with non-heat-conducting covering under

Contract No. 57-M.

The work of installing flexible stay bolts in three old boilers in Chestnut Hill Station No. 1 and one old boiler in Chestnut Hill Station No. 2 under Contract No. 59-M, was in progress at the end of the year.

P.D. 48

Four fuel oil storage tanks, built by the Massachusetts Engineering Company, Inc., under Contract No. 55-M were installed at the Chestnut Hill Pumping Stations and the work of installing fuel oil burning equipment at these stations, under Contract No. 56-M with the Peabody Engineering Corporation, was in progress at the end of the year.

The old underground armored electric lighting and power cables between Chestnut Hill Pumping Stations Nos. 1 and 2, which had been grounded in many places were replaced with new cables laid in underground conduits,

and as a result the electric service has been greatly improved.

At all of the pumping stations the boilers have been regularly inspected and the machinery kept in dependable condition.

### DISTRIBUTION RESERVOIRS

The locations, elevations and capacities of the distribution reservoirs of the Metropolitan Water Works are shown by the following table:

DISTRIBUTION RESERVOIRS AND	Elevation of High Water <sup>1</sup>	Capacity in Gallons				
Low Service: Spot Pond, Stoneham and Medford Chestnut Hill Reservoir, Brighton district o Weston Reservoir, Weston Mystic Reservoir, Medford Northern High Service: Fells Reservoir, Stoneham Bear Hill Reservoir, Stoneham Northern Extra High Service: Arlington Reservoir, steel tank, Arlington Southern High Service:	f Bos	ston	:		163.00 134.00 200.00 157.00 271.00 300.00 442.50	1,791,700,000 300,000,000 200,000,00 26,200,000 41,400,000 2,450,000 2,000,000
Fisher Hill Reservoir, Brookline	•		: : : oston		251.00 264.50 192.00 251.00 375.00	15,500,000 13,500,000 5,100,000 330,000 2,500,000 2,400,680,000

<sup>1</sup>Elevation in feet above Boston City Base.

Powder Horn Hill Reservoir of the city of Chelsea is used when necessary for the northern high service. It has a capacity of 1,000,000 gallons with high-water line at elevation 196.6 and was in service from January 1 to April 16 and from December 3 to 31.

The Mystic and Forbes Hill reservoirs have been kept full of water for an emergency but were not used during the year. A store house with hollow tile walls, plastered inside and with stucco finish outside, was constructed

at the Forbes Hill Reservoir.

The Lawrence basin of the Chestnut Hill Reservoir was out of service

from January 1 to May 25 and from July 12 to October 4.
All other distribution reservoirs were in regular service throughout the

The Parks Division was paid \$3,135.31 for police service at Spot Pond, Fells and Bear Hill reservoirs.

### DISTRIBUTION PIPE LINES

The new 60-inch diameter welded steel Weston Aqueduct Supply Main No. 4 was put into service November 15 from the Charles River at Commonwealth Avenue in Newton to North Harvard Street at Western Avenue

in Boston, a distance of 5¾ miles.

November 17 Contract No. 60-M was made with L. P. Federico & Son for relaying the northerly of the two submerged pipe lines under the Neponset River in Hyde Park. The pipe line is 160 feet in length and 12 inches in diameter with flexible joints. It was laid in 1902 but was later disturbed by a dredge when the river was deepened and widened and the pipe line

26 P.D. 48

was injured so that it could not be kept water-tight. Work under this contract was well advanced at the close of the year.

During the year 42 leaks were repaired in the distribution mains at a cost

of \$3,221.32.

There are 88 Venturi meters, varying in size from 6 to 60 inches in diameter, in the distribution pipe lines; 73 of these are on connections supplying various towns in the Metropolitan Water District; 5 are on the Weston Aqueduct supply mains; 1 between the southern high service and the southern low service mains; 3 at the Arlington, Hyde Park and Spot Pond pumping stations; 1 at the city of Newton booster pumping station on Waban Hill; 2 on connections between the Weston Aqueduct supply mains and the local pipes in Washington Street, Newton; 1 on connection to the Fernald School in Waltham, and 2 on emergency connections with Cambridge and Wakefield distribution pipes. There are also 9 disc and 16 detector meters in use for measuring small quantities of water supplied at various places.

There are 6 pressure regulating valves in constant use for reducing pressure of water supplied to Revere, Swampscott and Winthrop, and the higher

portions of Belmont, East Boston and Hyde Park.

Recording pressure gages have been maintained at 29 places on the distribution system and tables in the Appendix show the hydraulic grade at 16 of these stations as determined by the charts.

Pipes, specials and other materials and supplies required for maintaining and operating the pipe lines are kept on hand at the Glenwood pipe yard in

Medford and the Chestnut Hill pipe yard in Brighton.

Auto trucks equipped with gate-operating attachments have been maintained with men on duty ready to operate them in case of emergency at any time during the day or night.

### CONSUMPTION OF WATER

During the year 46,845,557,000 gallons of water was furnished from the Metropolitan Water Works to the 18 cities and towns regularly supplied. This is equivalent to an average daily consumption of 127,993,300 gallons, and for the estimated population of 1,422,170 is at the rate of 90 gallons per

capita.

The town of Brookline, with an estimated population of 50,240, used from its local source 1,652,518,000 gallons of water, of which 382,339,000 gallons was supplied from elevation 375 and 1,270,179,000 gallons was supplied from elevation 250. In addition to this consumption the town was supplied with 54,210,000 gallons of water from elevation 250 by the Metropolitan Water Works, making the total average daily consumption of the

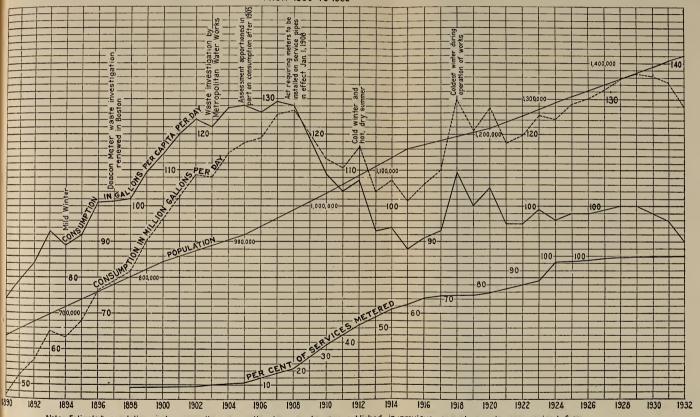

town 4,663,200 gallons, equivalent to 93 gallons per capita.

The city of Newton, with an estimated population of 69,530, was supplied from its local sources, with the exception of 99,644,000 gallons, which was furnished from the Metropolitan supply. Including this water, the average daily consumption was 5,022,300, equivalent to 72 gallons per capita. The amount of water furnished the city of Newton from the Metropolitan supply is 86,144,000 gallons in excess of the quantity which the city is entitled to take free of charge under the agreement made in 1900 when the Waban Hill Reservoir was purchased from the city, and for this water the city will pay \$8,611.82.

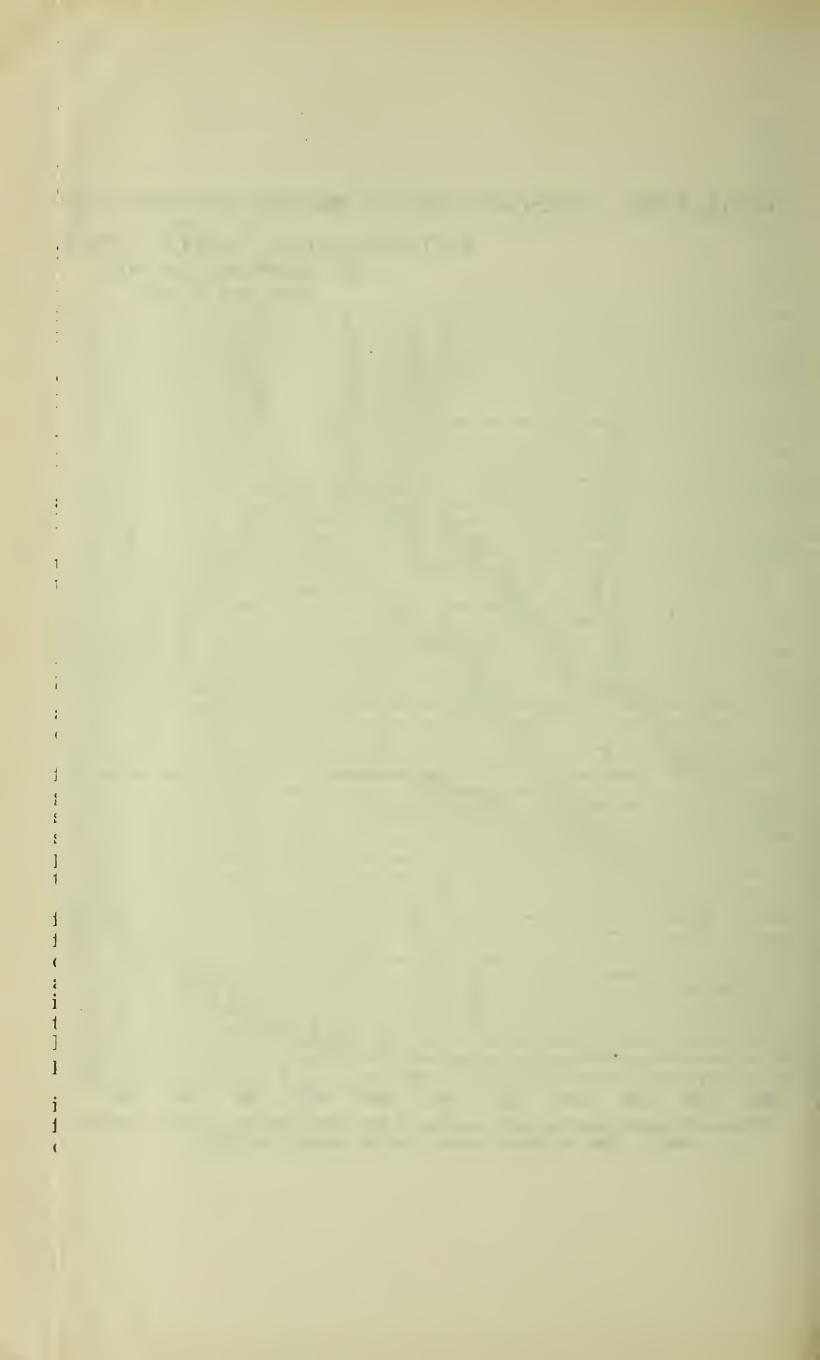

The population, consumption of water and per cent of services metered in the Metropolitan Water District as supplied in 1932 and for the period from 1890 to 1932, inclusive, are shown graphically by the accompanying

diagram.

# POPULATION, CONSUMPTION OF WATER AND PER CENT OF SERVICES METERED METROPOLITAN WATER DISTRICT AS SUPPLIED IN 1932 FROM 1890 TO 1932

Note: Estimated population and consumption per capita given on diagrams published in previous annual reports are revised from time to time as regular census figures become available.

P.D. 48
The average daily consumption of water in each of the municipalities in the Metropolitan Water District during 1931 and 1932 is as follows:

			Average	DAILY CONSU	MPTION

- Water is used throughout the year in all places.

The average daily use is in all cases figured on basis of 366 days.

<sup>1</sup>All but 404,000 gallons diverted from watershed. <sup>2</sup>Not diverted from watershed.

<sup>5</sup>Water supplied by the Commission through City of Quincy pipes, and by agreement revenue is divided in equal shares between the City and Commonwealth.

<sup>4</sup>The City of Quincy supplies the water and pays the Commonwealth by an addition to its regular

apportionment.

The Town of Arlington supplies the water and pays the Commonwealth by an addition to its regular apportionment.

<sup>6</sup>The City of Melrose supplies the water and pays the Commonwealth by an addition to its regular

Information regarding the installation of meters on service pipes by the municipalities supplied with water from the Metropolitan Water Works for the year 1932 and other statistics are given in tables in the Appendix.

Respectfully submitted,

Boston, January 2, 1933.

WILLIAM E. Foss, Director and Chief Engineer.

# REPORT OF DIRECTOR AND CHIEF ENGINEER OF SEWERAGE DIVISION

DAVIS B. KENISTON, Commissioner, Metropolitan District Commission.

DEAR SIR: — The following report of the operations of the Metropolitan Sewerage Division for the year ending December 31, 1932, is respectfully submitted:

### **ORGANIZATION**

The Director and Chief Engineer has charge of the design and construction of all new works, and of the maintenance and operation of all the works controlled by the Metropolitan District Commission for removing sewage from the thirty-three municipalities which comprise the Metropolitan Sewerage District.

The following assistants have been employed during the year:

Henry T. Stiff, Associate Civil Engineer, in charge of office and drafting room and of the construction work.

Ralph W. Loud, Senior Civil Engineer, in charge of survey work and field work in connection with the New Neponset Valley Sewer construction and the High-Level Sewer Extension to Newton.

Charles F. Fitz, Assistant Civil Engineer, in charge of maintenance studies and of maintenance construction work on the North Metropolitan

Benjamin Rubin, Assistant Civil Engineer, in charge of survey work and field work in connection with the Braintree-Weymouth Branch Sewer construction.

Seth Peterson, Superintendent, North Metropolitan Sewerage District.

Forrest F. Harbour, Superintendent, South Metropolitan Sewerage District. In addition to the above, the maximum number of engineering and other assistants employed during the year was 41, which includes 6 assistant engineers, 10 instrumentmen, 1 supervising sewer construction inspector, 7 inspectors, 1 draftsman, 13 rodmen and engineering assistants, 1 chauffeur and 2 stenographers.

### **OBITUARY**

The Metropolitan Sewerage Division has been unfortunate during this year because of the death of two important officials in its service. Mr. Frank B. Williams, Superintendent of the South Metropolitan Sewerage District, died April 9, 1932. Mr. Williams was a man of large experience in the construction of public works both as a designing and as a construction engineer. Mr. Arthur F. F. Haskell, Superintendent of the North Metropolitan Sewerage District, died September 7, 1932. Mr. Haskell had been in the employ of the Commission for many years as engineer of construction and had held the office of superintendent since February 2, 1920. These men were valuable assistants. Their positions were filled by the promotion of men in the service.

### METROPOLITAN SEWERAGE DISTRICTS

### AREAS AND POPULATIONS

During the year no additions to the area of the Metropolitan Sewerage Districts have been made.

The populations of the districts, as given in the following table, are based on the census of 1930.

	CITY OR TOW	'N .			Area (Squar	re Miles)	Estimated	Population
North Metropolitan District	Arlington Belmont Boston (portice Cambridge) Chelsea Everett Lexington Malden Medford Melrose Reading Revere Somerville Stoneham Wakefield Winchester Winthrop Woburn	ons of			5.20 4.66 3.45 6.11 2.24 3.34 5.11 5.07 8.35 3.73 9.82 5.86 3.96 5.50 7.65 5.95 1.61 12.71		41,320 24,780 94,540 115,670 47,370 51,370 6,180 61,680 65,660 24,660 10,410 37,900 107,080 10,460 16,870 13,290 17,340 19,740

	Totals .		•	•		$\frac{-}{318.25}$		1,569,990

### Metropolitan Sewers

### SEWERS PURCHASED AND CONSTRUCTED AND THEIR CONNECTIONS

During the year there have been 3.865 miles of Metropolitan sewers built within the sewerage districts, so that there are now 139.772 miles of Metropolitan sewers. Of this total, 9.642 miles of sewers, with the Quincy Pumping Station, have been purchased from cities and towns of the districts. remaining 130.130 miles of sewers and other works have been constructed by the Metropolitan Boards.

The locations, lengths and sizes of these sewers are given in the following tables, together with other data referring to the public and special connections

with the systems:

<sup>&</sup>lt;sup>1</sup>Part of Town.

<sup>2</sup>Including 1,754 in the Metropolitan State Hospital and the Middlesex County Tuberculosis Hospital, authorized by Chapter 372 of the Acts of 1928 and Chapter 373 of the Acts of 1929.

<sup>&</sup>lt;sup>1</sup>Includes 1.24 miles of sewer purchased from the city of Boston.

<sup>2</sup>Includes 0.158 of a mile of pipe sewer built for the use of the town of Brookline.

<sup>3</sup>Hull is not a part of the Metropolitan Sewerage District.

<sup>4</sup>Includes 0.025 of a mile of sewer purchased from the town of Watertown.

<sup>5</sup>The Metropolitan Sewer extends but a few feet into the town of Wellesley.

<sup>6</sup>No Metropolitan trunk sewer has been completed to give these towns an outlet.

Information relating to areas, populations, local sewer connections and other data for the Metropolitan sewerage districts appears in the following table:

### North Metropolitan Sewerage District

Area (Square Miles)	Estimated Total Population	Miles of Local Sewer Connected	Estimated Population Contributing	Ratio of Contributing Population to Total	CONNECTIONS MADE WITH METROPOLITAN SEWERS				
			Sewage	Population (Per Cent)	Public	Special			
100.32	766,320	971.65	714,020	93.2	378	733			
		South Metro	opolitan Sei	verage Distr	ict	'			
217.93	803,670	997.98	595,290	74.1	201	83			
	Both Metropolitan Sewerage Districts								
318.25	1,569,990	1,969.63	1,309,310	83.4	579	816			

Of the estimated gross population of 1,569,990 on December 31, 1932, 1,309,310, representing 83.4 per cent, were on that date contributing sewage to the Metropolitan sewers, through a total length of 1,969.63 miles of local sewers owned by the individual cities and towns of the districts.

These sewers are connected with the Metropolitan Systems by 579 public and 816 special connections. During the current year there has been an increase of 58.07 miles of local sewers connected with the Metropolitan Systems, and 10 public and 3 special connections have been added.

### CONSTRUCTION

### North Metropolitan Sewerage System

EXTENSION OF MILL BROOK VALLEY SEWER IN ARLINGTON

The only construction work in the North Metropolitan Sewerage District is that of the continuation of building Section 82 of the North Metropolitan System in Arlington. The particulars of this contract were given in last year's report. This work was completed and the sewer put in operation on June 1, 1932.

To complete the sewer in Mill Brook Valley to the Lexington town line will require one additional contract. This construction work has not yet been authorized by the Legislature.

### South Metropolitan Sewerage System

EXTENSION OF HIGH-LEVEL SEWER IN BRIGHTON AND NEWTON

In addition to the work previously authorized in the South District, the Legislature by Chapter 205 of the Acts of 1932 authorized the extension of the High-Level Sewer from its present terminus is Oak Square, Brighton, to the Brighton-Newton line. This extension will serve the purpose of relieving the present Charles River Valley Sewer by intercepting the sewage from a considerable portion of the higher parts of Newton now tributary to it and discharging the same into the High-Level Sewer by gravity.

### SECTION 87, HIGH-LEVEL SEWER IN BRIGHTON AND NEWTON

A contract for the construction of this section of sewer has been made by the Commission, some particulars of which are as follows:

Date of Contract No. 64, (Sewerage Division) December 29, 1932.

Name of Contractor, P. DeCristofaro Company, Incorporated.

Length of Section, 1,960 feet.

Size of concrete sewer, 5 feet 3 inches by 5 feet 6 inches.

Length of tunnel, 1,430 feet.

Length of open-cut trench, 530 feet.

Depth of excavation in trench, from 19 feet to 22 feet. Depth of excavation in tunnel, from 22 feet to 31 feet.

Assistant Engineer in immediate charge of the section, Ralph W. Loud. No work has been done under this contract up to the present time.

### NEW NEPONSET VALLEY SEWER

Contracts for the construction of Sections 109 (Part of), 110 (Part of),

114, 117, 118, 119 and 120 have been completed during the year.

Notice was given by the Commission to Norwood and Walpole that the New Neponset Valley Sewer had been so far completed as to enable them to make use of the same on June 30, 1932. These towns have made connections with the Metropolitan Sewer.

### NEW NEPONSET VALLEY SEWER, SECTION 121

A contract was let for the construction of this section, some particulars of which are as follows:

Date of Contract No. 56, (Sewerage Division) March 31, 1932. Name of Contractor, V. Barletta Company.

Length of Section, 5,483 feet.

Length of 20-inch vitrified pipe sewer, 4,200 feet.

Length of 27-inch by 36-inch concrete sewer, 883 feet.

Length of sewer in tunnel, 400 feet.

Depth of sewer in trench, from 4 feet to 28 feet. Depth of sewer in tunnel, from 20 feet to 31 feet.

Assistant Engineer in immediate charge of the section, Nathan Levy.

During the year work on this section has been carried on and at the present time 160 feet of tunnel have been excavated, 883 feet of 27-inch by 36-inch concrete sewer have been constructed and 1,260 feet of 20-inch vitrified pipe have been laid. The Metropolitan Sewer is now completed as far as Washington Street, Canton, and is ready for the town of Canton to connect its sewers up to that point.

### SQUANTUM PUMPING STATION, QUINCY

The construction work on this pumping station was completed and notice given to the city of Quincy early in September, 1932, that the sewers of Squantum might be connected therewith. The station was put into operation during September.

### BRAINTREE-WEYMOUTH BRANCH

At the end of the year 1931 but one contract had been let for the construction of the Braintree-Weymouth Branch, namely, Section 125. Particulars of this contract were given in last year's report. Work has been continued on this section and it is practically completed with the exception of some backfilling and minor details.

### Braintree-Weymouth Branch, Section 123

A contract was let for the construction of this section, some particulars of which are as follows:

Date of Contract No. 58, (Sewerage Division) May 26, 1932.

Name of Contractor, Bay State Dredging and Contracting Company.

Length of Section, 1,635 feet.

Structure, 48-inch cast-iron pipe.

Greatest depth of trench below mean low water, 43 feet, of which the lower 8 feet were largely in slate rock.

Assistant Engineer in immediate charge of the section, Benjamin Rubin.

### Work on this section has been completed.

### Braintree-Weymouth Branch, Section 124

A contract was let for the construction of this section, some particulars of which are as follows:

Date of Contract No. 60, (Sewerage Division) July 21, 1932.

Name of Contractor, C. & R. Construction Company.

Length of Section, 3,083 feet.

Length of 4 feet 9 inches by 5 feet concrete sewer in trench, 1,701 feet.

Length of 42-inch cast-iron pipe sewer, 32 feet.

Length of 4 feet 9 inches by 5 feet concrete sewer in tunnel, 1,350 feet.

Depth of sewer in trench, from 10 feet to 26 feet. Depth of sewer in tunnel, from 16 feet to 45 feet.

Assistant Engineer in immediate charge of the section, Benjamin Rubin.

Work has been carried on during the year on this section and 1,450 feet of sewer in trench have been completed and 400 feet of earth tunnel have been excavated. No sewer has yet been placed in the tunnel. In the construction of the earth tunnel serious difficulties were encountered, the bottom of the excavation most of the way being in very fine wet sand and the upper part of the excavation being in loose gravel. In order to un-water the fine sand in the bottom, the Contractor found it advantageous to introduce a well-point system connected with a suction pump. The use of this system has enabled the Contractor to proceed by open tunnel methods through difficult land which otherwise might have required compressed air tunnel methods. The system of drainage used is that of the More-trench Corporation of Rockaway, New Jersey. This is the first time this method has been used in tunnel work on the Metropolitan Sewerage Works.

### Braintree-Weymouth Branch, Section 122.

A contract was let for the construction of this section, some particulars of which are as follows:

Date of Contract No. 62, (Sewerage Division) October 27, 1932.

Name of Contractor, A. D. Daddario.

Length of Section, 5,530 feet.

Dimensions of concrete sewer, 5 feet by 5 feet 3 inches and 4 feet 9 inches by 5 feet.

Depth of sewer in trench, from 9 feet to 29 feet.

Assistant Engineer in immediate charge of the section, Benjamin Rubin.

Work has been continued on this section and at the present time 525 feet of sewer have been completed. In parts of this section very lively quick-sands were encountered. In order to carry out the work the Contractor has made use of the system devised by the More-trench Corporation of Rockaway, New Jersey, of well-points connected to a suction pump. This method has been effective and work has been carried on thereby without extreme difficulties.

### BRAINTREE-WEYMOUTH PUMPING STATION, QUINCY

The sub-filling for a roadway from Kilby Street, Hough's Neck, Quincy, to the site of the proposed pumping station was placed on the southerly side of the Metropolitan Sewer embankment.

Bids were received for the construction of the foundation and substructure work at the Braintree-Weymouth Pumping Station in Quincy on December

29, 1932. No award has yet been made.

### PUMPING EQUIPMENT FOR BRAINTREE-WEYMOUTH PUMPING STATION

A contract for furnishing the pumping equipment for this station was entered into by the Commission, some particulars of which are as follows:

Date of Contract No. 61, (Sewerage Division) August 18, 1932.

Name of Contractor, Turbine Equipment Company of New England.

The pumping machinery for this station is to consist of two units, each consisting of a 15,000,000 gallon DeLaval centrifugal pump operating under a head of 30 feet actuated by a 150 HP direct connected Diesel-Winton engine, together with all accessories appertaining. The machinery for this station is now being manufactured.

### Maintenance

### SCOPE OF WORK AND FORCE EMPLOYED

The maintenance of the Metropolitan Sewerage System includes the operation of 9 pumping stations, the Nut Island screen-house and 139.772 miles of Metropolitan sewers, receiving the discharge from 1,969.63 miles of town and city sewers at 1,395 points, together with the care and study of inverted siphons under streams and in the harbor.

At present the permanent maintenance force consists of 193 men, of whom 117 are employed on the North System and 76 on the South System.

These are subdivided as follows:

North Metropolitan System, 74 engineers and other employees in the pumping stations and 43 men, including foremen, on maintenance, care of sewer lines, buildings and grounds; South Metropolitan System, 46 engineers and other employees in the pumping stations and 30 men, including foremen, on

maintenance, care of sewer lines, buildings and grounds.

The regular work of this department, in addition to the operation of the pumping stations, has consisted of routine work of cleaning and inspecting sewers and siphons, caring for tide gates, outfall sewers, regulators and overflows, measuring flow in sewers, inspection of connections to the Metropolitan sewers, and the care of pumping stations and other buildings, grounds and wharves.

In addition to these regular duties, other work has been done by the maintenance employees in this department as follows:—

### EAST BOSTON PUMPING STATION

In the report of the Metropolitan Sewerage Works for 1931, mention was made of the beginning of retubing of the six vertical boilers in this station and removing of two old and the installation of two new Green economizers.

This work was completed during 1932.

Most of the machinist work in connection with the maintenance and repairs of the pumping units of the North Metropolitan Sewerage Pumping Stations is done at the general machine shop at this station. This work increases with the age of the units and the shop had become two small for handling the work. To provide larger quarters, the brick partition at the south end of the shop was moved about nine feet into the space originally used for men's dressing room and lockers This arrangement leaves suitable room for the men and increases the machine shop by about 270 square feet of floor space. At the same time a ceiling of reinforced concrete construction was placed midway in height over the men's room and the space thus afforded by using this as a floor furnished a loft for storage purposes which is directly connected with the machine shop by stairs. This arrangement enabled the introduction of an additional planer, two additional small lathes and an additional drill press to the machine shop equipment.

The condenser for engine No. 4 had become so badly corroded by the hot salt water that it was necessary to make extended repairs. These consisted of a new cast-iron base and two cast-iron cylinders with brass liners. Patterns for this work were made by the maintenance mechanics and all the

machine work and installation were done by the maintenance men.

### DEER ISLAND PUMPING STATION

At this station are four Scotch boilers installed in 1910. It was found necessary to retube these boilers. The work was done under contract by

the Hodge Boiler Works.

The four sewage screens at this station had become so badly corroded that repairs were no longer practical. Bids were solicited for the removal of the old ones and for the furnishing and installing of new ones. The work was completed by the Daniel Russell Boiler Works, the lowest bidder.

### QUINCY PUMPING STATION

The condenser pump used for pumping unit No. 2 at this station was installed in 1898. Extensive repairs were made on it by the maintenance

38 P.D. 48

employees. These consisted of new steam and water cylinders, liners, pistons This pump as now repaired is suitable for condenser use and valve rods. in connection with the new 15,000,000 gallon pumping unit at this station.

As originally constructed this station had two duplex reciprocating Deane pumps, one of 3,000,000 and one of 5,000,000 gallons of sewage per 24 hours To these were added a 10,000,000 gallons per 24 hours Lawrence centrifugal pump driven by a compound Sturtevant engine in 1907. Later (1923) the 3,000,000 gallon Deane pumping unit was replaced by a Morris pump and a Morris compound engine of 10,000,000 gallons per 24 hours

capacity.

The 5,000,000 gallon Deane pumping unit was removed this year and in its place has been installed a 15,000,000 gallon DeLaval pump actuated by a Fitchburg vertical uniflow engine. The placing of this unit is nearly completed and it will be ready for use early in the coming year. This unit was furnished f.o.b. cars Quincy by the Turbine Equipment Company of New England and was erected by the maintenance employees. the unit was done at the plants of the manufacturers and was witnessed by a testing engineer representing the Commission. It passed the tests and a bonus as provided in the contract was paid because of excellence of performance.

### SQUANTUM PUMPING STATION

This station was completed and put into operation on September 12, 1932. The two pumping units consist each of a vertical DeLaval pump actuated by a 60 HP Crocker-Wheeler motor capable of lifting 4,000,000 gallons of sewage per 24 hours against a total head of 46 feet. A reservoir capable of holding 300,000 gallons of sewage was built and this station is arranged to act automatically. No constant attendants are employed. The operation of the station is supervised by the engineer of the Nut Island Station. Sewage from the station is discharged through a cast-iron force main into

the Boston Main Drainage works at Squantum Head as authorized by the

Legislature in Chapter 240 of the Acts of 1928.

### HOUGH'S NECK PUMPING STATION

The electric energy required to operate the Hough's Neck Pumping Station is produced by generators in the Nut Island Screen House and is transmitted over a distance of one-half mile through underground conduits. The lead covered cables which carry this current were installed originally in 1910. The lead casing had become so badly corroded that it was necessary to replace them by new ones. These were purchased by the Commission and the work of laying was done by an arrangement with the Quincy Electric Light and Power Company who had special appliances for this work. connections and finishing work were done by maintenance employees.

### GASOLENE IN PUBLIC SEWERS

During the year the usual precautions have been maintained against the introduction of gasolene into the Metropolitan sewers. An inspector who covers both North and South Metropolitan Sewerage Districts has been employed. His duties are to see that all newly constructed garages or other gasolene-using establishments are supplied with a proper gasolene separator

and also to see that these separators are kept in working condition.

During the year 1932 the number of permits issued by the municipalities in the Sewerage Districts for the construction of garages and other places where gasolene is used was 205. Each of these permits necessitates an examination by our inspector. Many of them are attended to through the mails and do not require a personal visit. Visits are made, however, to all locations where a connection is to be made with the public sewerage system and to such places as do not respond to the return postal cards sent out. During the year 20 such places were connected with the sewers that empty into the Metropolitan Systems. At the present time, there are, according to our records, 1,631 garages and other establishments where gasolene is

P.D. 48

used connected with the local sewerage systems which discharge into the

Metropolitan sewers.

This system of inspection has improved the gasolene situation in regard to the danger to the sewers. Occasionally odors of gasolene are detected in the sewers. These are reported to the Public Safety Department which alone has statutory control of the distribution and handling of gasolene in the Commonwealth.

# NORTH METROPOLITAN SEWERAGE SYSTEM

Table showing Cities and Towns delivering Sewage to this System; Approximate Miles of Sewers connected; Estimated Populations and Areas now contributing; Total Areas ultimately to contribute, and Present Populations on Such Areas; Ratios of Present Contributing Areas to Ultimate Areas, and Ratios of Populations now contributing to Present Total Populations.

<sup>1</sup>Estimated from Assessor's statement of the number of houses in each city or town on April 1, 1932, and the population from census of 1930.

Parts of Dorchester, Milton, Roxbury and West Roxbury which are situated within the South Metropolitan Sewerage District limits are tributary at present to Boston

Part of town not included in Metropolitan Sewerage District. At present connected with Boston main drainage system.

Including connection with institution at Austin Farm, having an estimated population of 2,510.

No Metropolitan trunk sewer has been completed to give these towns an outlet.

Including connections with the Metropolitan State Hospital and the Middlesex County Tuberculosis Hospital authorized, by chapter 372 of the Acts of 1928 and chapter

373 of Acts of 1929, having an estimated population of 1,754.

§Includes 3.65 miles of trunk sewer built by Waltham for the joint use of Waltham, Watertown, Metropolitan State Hospital and Middlesex County Tuberculosis Hospishicludes 3.65 miles of trunk sewer built by Waltham for the joint use of Waltham, Watertown, Metropolitan State Hospital and Middlesex County Tuberculosis Hospital tal, authorized by Chapter 372 of the Acts of 1928 and Chapter 373 of the Acts of 1929.

### PUMPING STATIONS

### Capacities and Results

### NORTH METROPOLITAN SYSTEM

### Deer Island Pumping Station

At this station are four submerged centrifugal pumps with impeller wheels 8.25 feet in diameter, driven by triple-expansion engines of the Reynolds-Corliss type.

Contract capacity of 1 pump: 100,000,000 gallons, with 19-foot lift.

Contract capacity of 3 pumps: 45,000,000 gallons each, with 19-foot lift.

Average coal duty for the year: 54,700,000 foot pounds. Average quantity raised each day: 82,400,000 gallons. Maximum quantity raised per day: 151,700,000 gallons.

### East Boston Pumping Station

At this station are four submerged centrifugal pumps, with impeller wheels 8.25 feet in diameter, driven by triple-expansion engines of the Revnolds-Corliss type

Contract capacity of 1 pump: 100,000,000 gallons with 19-foot lift. Contract capacity of 3 pumps: 45,000,000 gallons each, with 19-foot lift. Average coal duty for the year: 66,200,000 foot pounds.

Average quantity raised each day: 80,400,000 gallons. Maximum quantity raised per day: 149,700,000 gallons.

### Charlestown Pumping Station

At this station are three submerged centrifugal pumps, two of them having impeller wheels 7.5 feet in diameter, the other 8.25 feet in diameter. are driven by triple-expansion engines of the Reynolds-Corliss type. Contract capacity of 1 pump 60,000,000 gallons with 8-foot lift.

Contract capacity of 2 pumps: 22,000,000 gallons each, with 11-foot lift. Average coal duty for the year: 54,900,000 foot pounds. Average quantity raised each day: 41,700,000 gallons. Maximum quantity raised per day: 70,000,000 gallons.

### Alewife Brook Pumping Station

The pumping units in this station consist of one Andrews pump driven by a compound marine engine, one Morris pump and Morris compound engine and a specially designed engine of vertical cross-compound type having between the cylinders a centrifugal pump rotating on a horizontal axis. Contract capacity of the Andrews pump: 4,500,000 gallons with 13-foot lift. Contract capacity of Morris pump: 8,000,000 gallons with 15-foot lift. Contract capacity of the special pump: 13,000,000 gallons with 13-foot lift. Average coal duty for the year: 23,800,000 foot pounds. Average quantity raised each day: 6,950,000 gallons. Maximum quantity raised per day: 21,000,000 gallons.

### Reading Pumping Station

At this station are two submerged centrifugal pumps, one of 2,500,000 gallons per 24 hours, and one of 4,000,000 gallons per 24 hours, capacity. These operate against a maximum head of 65 feet, and are actuated by vertical shafts directly connected with 75 and 100 horse-power motors. Alternating current of 440 volts furnished by the town of Reading is used. Average quantity pumped per 24 hours: 1,185,000 gallons. Maximum quantity raised per day: 3,750,000 gallons.

## SOUTH METROPOLITAN SYSTEM

Ward Street Pumping Station

At this station are two vertical, triple-expansion pumping engines, of the Allis-Chalmers type, operating reciprocating pumps, the plungers of 11

which are 48 inches in diameter with a 60-inch stroke and one 50,000,000-gallon centrifugal pumping unit actuated by a 500 H.P. Uniflow engine. Contract capacity of 3 pumps: 50,000,000 gallons each, with 45-foot lift. Average coal duty for the year: 83,300,000 foot pounds. Average quantity raised each day: 35,200,000 gallons. Maximum quantity raised per day: 67,100,000 gallons.

Quincy Pumping Station

The plant at this station consists of one compound condensing Deane duplex piston pumping unit and one Lawrence centrifugal pump driven by a Sturtevant compound condensing engine and one Morris centrifugal pump driven by a Morris compound condensing engine.

Contract capacity of 3 pumps: Morris centrifugal, 10,000,000 gallons; Deane, 5,000,000 gallons; Lawrence centrifugal, 10,000,000 gallons.

Average coal duty for the year: 35,300,000 foot pounds. Average quantity raised each day: 7,940,000 gallons. Maximum quantity raised per day: 18,310,000 gallons.

Nut Island Screen-house

The plant at this house includes two sets of screens in duplicate actuated by small reversing engines of the Fitchburg type. Two vertical Deane boilers, 80 horse-power each, operate the engines, provide heat and light for the house, burn materials intercepted at the screens, and furnish power for the Houghs' Neck pumping station.

Average daily quantity of sewage passing screens: 68,400,000 gallons. Maximum quantity passing screens per day: 205,000,000 gallons.

Hough's Neck Pumping Station

At this station are two 6-inch submerged Lawrence centrifugal pumps with vertical shafts actuated by two Sturtevant direct-current motors.

The labor and electric energy for this station are supplied from the Nut Island Screen-house, and as used at present it does not materially increase the amount of coal used at the latter station.

Average quantity raised each day: 275,000 gallons. Maximum quantity raised per day: 527,000 gallons.

Squantum Pumping Station

At this station are two pumping units each consisting of a 10-inch submerged DeLaval centrifugal pump with vertical shaft actuated by a Crocker-Wheeler 60 HP motor. Each unit is capable of lifting 4,000,000 gallons of sewage per 24 hours against a head of 46 feet.

The electric energy for this station is purchased from the Quincy Electric

Light & Power Company.

Average quantity raised each day: 77,200 gallons.

Average Daily Volume of Sewage lifted at Each of the Nine Metropolitan Sewerage Pumping Stations during the Year, as compared with the Corresponding Volumes for the Previous Year

### METROPOLITAN SEWERAGE OUTFALLS

The Metropolitan Sewerage Districts now have outfalls in Boston Harbor at five points, two of which may discharge sewage from the North District and three from the South District.

During the year the sewage of the North District has been discharged wholly through the outlet located near Deer Island light. The other outfall of this system is closed by a cast-iron cover which can easily be removed.

Of the outfalls of the South District two extend for a distance exceeding one mile from the shore of Nut Island, Quincy, and the third one, called an emergency outlet, extends about 1,500 feet from the same. It was necessary

to discharge sewage through this outfall 131 hours during the year.

During the year the average flow through the North Metropolitan District outfall at Deer Island has been 82,400,000 gallons of sewage per 24 hours, with a maximum rate of 151,700,000 gallons during a stormy period in November 1932. The amount of sewage discharged into the North Metropolitan District averaged 115 gallons per day for each person, taking the estimated population of the District contributing sewage. If the sewers in this District were restricted to the admission of sewage proper only, this

per capita amount would be considerably decreased.

In the South Metropolitan District an average of 68,400,000 gallons of sewage per 24 hours has passed through the screens at the Nut Island Screen-house and has been discharged from the outfalls into the outer harbor. The maximum rate of discharge per day which occurred during a stormy period in November 1932 was 205,000,000 gallons. The discharge of sewage through these outfalls represents the amount of sewage contributed by the South Metropolitan District, which was at the rate of 115 gallons per day per person of the estimated number contributing sewage in the District.

### MATERIAL INTERCEPTED AT THE SCREENS

The material removed from the sewage at the screens of the North Metropolitan Sewerage Stations, consisting of rags, paper and other floating materials, has during the year amounted to 1,872 cubic yards. This is equivalent to 1.68 cubic feet for each million gallons of sewage pumped at Deer Island.

The material removed from the sewage at the screens of the South Metropolitan Sewerage Stations amounted to 4,760 cubic yards, equal to 5.14 cubic feet per million gallons of sewage delivered at the outfall works at Nut Island.

Studies of sewage flows in the Metropolitan sewers and siphons indicate that they are free from deposit.

### Frederick D. Smith,

Director and Chief Engineer of Sewerage Division.

Boston, January 1, 1933.
